Endpoint Security for Ransomware

Stop malware attacks before they can impact your critical IT systems

Distributed workforces are the new normal. CIOs and CISOs are tasked with providing resilience against ransomware and other cybersecurity threats that can severely impair business operations.

Blue Mantis Endpoint Security solutions help to harden your IT environment and protect against sophisticated ransomware, malware, and other cybersecurity attacks.

AI-powered ransomware defense

Powered by industry leader Sophos and featuring deep learning artificial intelligence (AI), Blue Mantis Endpoint Security reduces your cybersecurity attack surface. Advanced AI sifts through hundreds of millions of attack samples to identify zero-day threats, block malicious websites, and secure against these attacks without needing threat signatures.

Blue Mantis Endpoint Security automatically detects and blocks the processes used in ransomware attacks against your network endpoints—whether they are on prem or remote—and safely rolls back encrypted files to minimize the impact on your business.

Customized endpoint protection

Blue Mantis professional services design native endpoint integrations covering server, firewall, email, cloud, mobile, and Microsoft 365 deployments. Your IT managers get a holistic view of all endpoint threats from a secure dashboard. Take control of specific endpoints or groups of endpoints in real time with actionable data and recommendations.

Top verticals for endpoint clients

Finance & Banking

Healthcare &
Life Sciences

Business Services

Retail

Manufacturing

Public Sector

Powered by **SOPHOS**

- Deploys quickly to your on-prem, cloud, and remote endpoints with no performance impact to user devices
- Blocks ransomware using advanced AI technology and safely rolls back your affected files after an incident
- Reduces your attack surface with granular app, device, and web controls

Learn how you can save on MDR plus ransomware protection and disaster recovery with a Blue Mantis Cybersecurity Bundle.

”

“Damage from ransomware attacks to healthcare, tech, and other key industries cost \$20 billion just a year ago and is predicted to exceed \$265 billion in the next few years.”
