

Cybersecurity Bundles

Build resilience into your business

It's no secret cyberattacks increase during economic uncertainty. Building up your IT resilience means protecting data on a sprawling number of devices, across an increasingly distributed workforce with deep visibility into multi-cloud estates—and then rapidly and accurately responding to threats.

But can you do that with an already-overworked IT staff and without affecting your employee productivity?

Comprehensive security as a service

Blue Mantis Cybersecurity Bundles deliver turnkey solutions that increase your IT infrastructure's resilience against ransomware and other advanced threats.

Our Cybersecurity Bundles flex with your specific business needs. We offer different combinations of endpoint protection, full 24/7 managed detection and response services, and data restoration.

For less than the cost of hiring one full-time IT security expert, Blue Mantis makes it simple to get the resilience your business needs.

Tiered bundle options to match your desired business outcomes

Blue Mantis Cybersecurity Bundles are offered in two tiers to match your business needs and budget:

Bundle tier	What's included		Cost efficiency	
Standard	<div></div> <div>Endpoint Protection</div>	<div></div> <div>Data Restoration</div>	Highly affordable	
Premium	<div></div> <div>Endpoint Protection</div>	<div></div> <div>Data Restoration</div>	<div></div> <div>Managed Detection & Response</div>	Best value

Businesses need resilience now more than ever

- Detect ransomware, and other attacks on your users, network, and endpoints
- Protect your IT infrastructure with 24/7 managed detection and response
- Recover encrypted data in minutes for increased business resilience
