Datacenter Modernization

Optimize your datacenter resources

For IT leaders with datacenter resources, adopting new consumption-based models while ensuring data security and compliance is required to stay competitive. But as business demands grow, you need to optimize systems at scale without escalating costs.

Blue Mantis Datacenter Modernization solutions help you secure and integrate your hybrid IT environments to enable and support your technical and business roadmap.

Reduce tech debt and increase security

Outdated legacy systems are a risk to your business. Blue Mantis helps you reduce technical debt by balancing maintenance with modernization. Gain flexibility with on-prem, cloud, and hybrid systems optimized for enterprise scale and cost. We assess, modernize, and manage your servers, storage, and database resources to meet your desired business outcomes while ensuring all systems are protected by a zero-trust security framework.

Data management & business continuity

Our solutions protect your critical data and minimize downtime associated with a cyberattack or disaster. Blue Mantis provides turnkey data storage, managed business continuity, and disaster recovery solutions that are optimized for speed, security, and cost. Trust Blue Mantis to deliver cloud-like scale and extreme availability to your IT infrastructure.

Benefits of Datacenter Modernization with Blue Mantis

Industry knowledge and experience

With over 30 years of experience partnering with industry leaders to continually evolve the datacenter, we use industry best practices and advanced automation and tooling.

Security-first approach

We architect customized IT solutions using a zero-trust security framework. You benefit from Blue Mantis synergies with our world-class Cybersecurity, Cloud, Network, Managed Services, and other expertise.

Outcome driven

We assess your required business outcome, holistically modernizing systems accordingly, and if need be, managing your solution for you.
