GitMantis

A turnkey managed GitOps platform

By 2025, Gartner estimates over 95% of new workloads will be on cloud-native platforms. Many companies adopted DevOps and containerization to streamline operations and reduce costs. But CIOs now face new challenges like “tool sprawl,” managing distributed configurations, and lack of real-time visibility, not to mention the issues of security and compliance.

Blue Mantis improves DevOps with our GitOps code delivery platform, **GitMantis**. Delivered as a cloud-native managed service, GitMantis supercharges your IT team's productivity by unifying, simplifying, and securing all aspects of your DevOps.

Innovate without operational friction

Implementing a successful DevOps practice requires IT to deploy complex cloud infrastructure, enterprise-level security, and an array of cloud-native software tools—with deep observability across everything. But the work required by IT to cobble together disparate systems to meet constantly shifting business outcomes, security policies, and compliance regulations can often exceed the IT budget to deploy DevOps at most companies.

GitMantis removes barriers between developers and IT operations at your organization. Blue Mantis partnered with industry leaders Nethopper and CloudTruth to combine multiple DevOps tools and world-class cloud infrastructure into a single unified platform. You get a turnkey platform of secure Git repositories with integrated tools to automate, secure, and observe key aspects of your DevOps.

Accelerate your time to market

Time is money, and it takes an average of two months to build and release code using a DevOps framework. Deploying GitMantis reduces build/release times to only two weeks. If you have teams of DevOps engineers, your savings can easily reach into the millions.

Schedule an assessment with Blue Mantis to see at how you can transform your IT operations today with GitMantis. We have a modular assessment program that empowers you to address specific operational challenges on your terms and on your timeline.

Automate and secure your DevOps with the power of Git

- Increase productivity for your IT teams with a unified GitOps platform delivered as a managed service.
- Reduce time to market and accelerate development velocity.
- Enhance security without sacrificing productivity using holistic platform-level observability and dynamic secret rotation.
