Incident Response Solutions

Prepare for disruptive security incidents

According to the Thales Data Threat Report, 51% of organizations worldwide have no incident response plan even though as many as 90% of US-based organizations have been hit by ransomware attacks. The last thing any CISO or other IT leader needs is to live in fear of a breach.

Blue Mantis Incident Response solutions ensure you never have to worry about how your organization will respond to a cybersecurity incident.

Respond & recover 24/7/365

Blue Mantis Incident Response solutions are built using true best of breed technologies, techniques, and processes from our partners at Arctic Wolf, Sophos, and our own in-house experts. We provide you priority access to a team of cybersecurity experts who will assess the situation, recommend a response, and manage that response from start to finish at a competitive rate. Whether it's the middle of the night on a Sunday or a typical Tuesday afternoon, Blue Mantis Incident Response solutions can begin a dedicated response to cybersecurity incidents within as little as one hour of your initial call.

We all know it's not "if" an organization experiences a security incident, it's a matter of "when." When your data, devices, or critical systems have been compromised, you need an experienced, immediate, and sustained response. Blue Mantis Incident Response solutions can cover your business-critical systems with on-demand services that stop active attacks using a team of cybersecurity experts on retainer. Blue Mantis experts follow the NIST Cybersecurity Framework guidelines to maximize recovery and help you strengthen your security posture to avoid future incidents. No matter when an incident is declared, we are engaged 24/7 until the issue is resolved.

Our partners

Benefits

- Proven expert response to cyber incidents 24/7/365
- Detailed reporting of compromised systems with actionable remediation steps
- Best of breed tools and processes to restore your IT estate against ransomware and other cybersecurity attacks

Incident Response Solutions

Flexible options to meet your desired business outcomes

There are no “one size fits all” cybersecurity incident responses for what’s often the most stressful time in any IT executive’s career: an active cyberattack. What’s worse is that most service providers just sell you a set number of consultant hours on retainer that may or may not cover everything you need to solve your cybersecurity crisis. You need a solution that scales with your needs.

Blue Mantis Incident Response solutions are not just “a bucket of hours” you buy for limited access to outsourced cybersecurity contractors that are quickly spent during a cyberattack. Instead, we deliver cybersecurity experts dedicated to resolve your incident based on prearranged processes based on your budget, risk profile, and desired business outcomes. Our incident response solutions scale thanks to our in-house resources and our world-class partners Arctic Wolf and Sophos. If you need post-incident monitoring, Blue Mantis can integrate Managed Detection and Response (MDR) services into your existing IT processes to deliver 24/7 cybersecurity threat investigation and neutralization from credentialed experts in global security operations centers.

 Secure your environment by eliminating threat actor access.	 Analyze the cause and extent of the bad activities inside your network.	 Restore your organization to its pre-incident condition.
Remediate root point of compromise	Calculate attacker dwell time	Recover data and restore systems
Monitor for any re-entry attempts	Investigate which files may have been accessed, deleted, or stolen	Negotiate ransom settlements
Collect and preserve data and evidence	Provide explanation of forensic findings	Customize IR plan against future threats
