

M365 Critical Security Controls Assessment

Strengthen your Microsoft 365 security

Proactive strategies to protect against data breaches are needed now more than ever. In 2023, businesses with Microsoft 365 and Entra ID saw over 150,000 business email compromise attempts per day—and a total of over 40 billion attempted password attacks. Blue Mantis M365 Critical Security Controls Assessment evaluates your Microsoft 365 tenant's configuration and security, offering gap analyses, prioritized remediation strategies, and customized best practices to enhance your overall security posture.

Find and fix hidden vulnerabilities

With a Blue Mantis M365 Critical Security Controls Assessment, you can identify which of the over 20 technical and procedural safeguards based on respected Center for Internet Security (CIS) standards are currently implemented in your Microsoft cloud IT environment. During a week-long professional services engagement, Blue Mantis' team of certified cybersecurity experts evaluate:

- ✓ Must-have Microsoft 365 cloud security controls
- ✓ Microsoft Entra ID identity and access management analytics
- ✓ Exchange, SharePoint, Teams, and Copilot AI data policies

Most importantly, performing a Blue Mantis M365 Critical Security Controls Assessment not only delivers comprehensive reporting on security recommendations for your M365, we also remediate the most common M365 vulnerabilities for you. We give IT leaders the deep visibility into their Microsoft 365 environments needed to identify and remediate the vulnerabilities busy cybersecurity professionals sometimes (but can't afford to) miss.
