Managed Zscaler

Harden your IT security with a cloud-based zero trust solution

Gartner analysts say today's "human-centric workforce" is a boon to productivity, but introduces challenges for IT leaders. How do you provide employees with on-demand productivity tools at the office, home, and anywhere in between—all in a seamless environment that doesn't sacrifice data security?

Managed Zscaler from Blue Mantis rises to the challenge with a unified platform that consolidates security across cloud or on-prem apps and services. Managed Zscaler streamlines your IT operations with a centralized solution in a zero trust security framework.

Reduce risk, complexity, and cost

Go beyond outdated point-based perimeter security systems with Managed Zscaler from Blue Mantis. Using a cloud-based and globally distributed secure service edge (SSE) model, our Managed Zscaler solutions protects your users and their network endpoints at any location. By unifying multiple advanced network security tools into a single cloud-native solution, you remove the friction (and costs) related to deploying multiple security boxes and licenses on your network at scale.

Support for your strategic vision

Blue Mantis is a leader in managed services with a proven 30+ year track record of delivering strategic IT business solutions. If you have Zscaler today and want to untangle yourself from the complexities of managing and supporting users, Blue Mantis can seamlessly integrate into your IT service desk. We can also assess, modernize, and manage a custom Zscaler solution for your IT environment that meets your desired business outcomes.
