Ransomware Readiness

Are your prepared for an attack?

Ransomware is an existential threat to every industry. Attacks occur every 11 seconds, the average downtime is 21 days, and ransomware payouts just reached an all-time high. Businesses are extorted for millions every year—with an increasing number closing forever.

Blue Mantis can help your organization identify and minimize any ransomware vulnerabilities with Ransomware Readiness.

Assess your ransomware resilience

Blue Mantis Ransomware Readiness simulations combine best-of-breed services and technologies in a Purple Team style environment to quickly find and quantify potential ransomware vulnerabilities across your corporate IT estate. Our certified cybersecurity experts work with you to determine expected results prior to performing the simulation and compare that to actual results after the simulated attack. We then provide you with clear and practical guidance on how to improve your security posture and protect your organization from cyber threats, even with limited IT resources and budgets. We can even help with implementing improvements.

Blue Mantis Ransomware Readiness exercises can be applied across industries such as healthcare, finance, manufacturing, retail, the public sector, and more to ensure your organization's data is secured and compliant with all applicable regulatory standards.

Benefits

Real-time & Real-world
Blue Mantis cybersecurity experts conduct a simulated real-world ransomware attack to reveal your exposure and response in real-time.

Immediate & Actionable
Blue Mantis uncovers and pinpoints potential ransomware vulnerabilities immediately rather than waiting weeks or months, then explains how to fix them.

Detailed Reporting
Blue Mantis customizes your Ransomware Readiness Report for both technical and business decision makers in your organization.

Ransomware Readiness Simulations

- Eumlate real world ransomware playbooks
- Test defenses against simulated attacks
- Report on recommended mitigation steps

Additional Options

- NIST Security Assessments
- Microsoft 365 Critical Security Controls Assessment
- Backup & Recovery

Let's meet the future.
