

Microsoft Azure VMware Solution Checklist for CIOs

Many CIOs with existing investments in VMware are considering their options since the Broadcom acquisition. Whether you lean towards a full cloud migration or a hybrid approach that balances on-premises control with cloud agility, Blue Mantis offers solutions that enable you to continue innovating and growing your IT capabilities.

For organizations with existing investments in Microsoft Azure or Microsoft 365, the Azure VMware Solution (AVS) opens a strategic path to migrate your business-critical assets to the cloud while maintaining the control, reliability, and familiarity you expect from VMware.

Consider AVS if your IT modernization strategy includes:

Feature/Benefit	Azure VMware Solution (AVS)
Integrate my VMware assets with cloud resources	Seamless integration, allowing you to leverage existing VMware tools and management practices in Azure.
A fast and simplified migration path to the cloud	Direct migration of existing VMware workloads to Azure that retains all of your existing operational practices without the need to re-architect.
Scalability that matches strategic business goals	Instant access to Azure's global cloud infrastructure, offering unparalleled scalability for VMware workloads.
Operational consistency with existing VMware processes	Maintains operational consistency with existing VMware environments, reducing learning curves and operational overhead.
Connect to cloud-native enterprise apps and services	Direct access to Microsoft cloud services, facilitating innovation and modernization of applications without significant retooling.
Reduce overall IT costs	Potential for cost savings through reduced on-premises infrastructure needs and efficient scaling in the cloud.
Enhanced data security for regulatory compliance	Benefits from Azure's robust security posture and compliance coverage, enhancing the security of VMware workloads in the cloud.

Explore Your AVS Options

Blue Mantis is a top Microsoft Solutions Provider with over 30 years of experience in empowering businesses to innovate, scale, and secure their enterprise operations. Connect with one of our experts to assess your options for extending your VMware environment to the Azure cloud. Whether you want full control over your cloud or want a fully-managed service, we deploy solutions that align with your strategic objectives.
