Cyber Risk Assessments for Private Equity Firms

Assess Risks Across Your Portfolio

Blue Mantis and our partners at CyberSaint deliver standards-based risk assessments customized for the needs of private equity firms. Built on the CyberStrong secure cloud platform, this turnkey solution uses advanced AI to identify, quantify, and prioritize cyber risks across your entire business portfolio.

Blue Mantis Cyber Risk Assessments for Private Equity Firms help speed up compliance and control scoring by combining an AI-powered platform with the world's largest dataset of cyber loss data. Additionally, we enabled you to visualize cyber risk across multiple companies in your portfolio with customized heat maps, financial impact charts, and more. With a Blue Mantis assessment, remediation and tracking is streamlined, focusing on both risk reduction and return on investment from comprehensive reporting.

Case Study: Vista Equity Partners

With over \$100B in assets under management, US-based PE firm Vista Equity Partners sought a solution that could streamline cybersecurity assessments and reporting across their entire portfolio. Lacking oversight of their portfolio and needing a way to communicate cyber risks associated with their portfolio companies to senior management, the firm found this AI platform would:

- ✔ Standardize cyber risk assessments with consistent processes and framework models across Vista Equity Partner's multiple portfolio companies and industries.
- ✔ Centralize all risk and compliance data to ensure that all stakeholders are tracking and reporting from a verified "single source of truth."
- ✔ Automate mapping of controls across all framework models to eliminate manual effort during the labor-intensive assessment process.

Vista Equity Partners adopted the CyberStrong platform as their unified solution to identify and manage cybersecurity risks. Similarly, Blue Mantis successfully uses this AI cloud platform to make the process more efficient and effective while empowering our PE customers with deep visibility and transparency into all potential cybersecurity risks. Blue Mantis Cyber Risk Assessments for PE Firms combine our proven cybersecurity expertise with CyberSaint's platform to provide your firm with a holistic view of cyber risk across your entire portfolio.

Benefits

- Empower security and business leaders with AI-powered analysis showing the interplay of risks and investments to make data-driven decisions
- Identify and quantify the cyber risks across multiple companies in your portfolio with heat maps, financial impact charts, and more
- Streamline remediation and tracking, focusing on cost-effective risk reduction and ROI, with comprehensive reporting capabilities
