

The Adlumin Difference

We make it easy for you to take charge of your digital security with the resources you have today.

Adlumin provides the flexibility to either manage security operations on your own or rely on our 24x7 Security Operations Center (SOC) for expert monitoring and rapid response. Our Security Operations as a Service platform is easy to deploy and seamlessly integrates with your existing technology stack—you'll be up and running quickly, minimizing downtime. Designed to grow alongside your organization, Adlumin scales effortlessly to meet your increasing security needs as your business evolves.

Combat Cyber Threats with AI and People

Our platform combines AI that's constantly learning and improving paired with human experts who actively monitor to ensure nothing goes unnoticed.

Transform Risk into Cyber Resiliency

We simplify data on potential risks with security policy misconfiguration, IT controls, and admin privileges, making it easy to resolve risks.

Boost Your Resource Efficiency

Get a unified view of your security with end-to-end detection, investigation, response, and resiliency—all with one login.

Adlumin Security Operations as a Service Platform

Extended Detection and Response (XDR)

Mitigate and respond to threats across your endpoints, network, and cloud.

Managed Detection and Response (MDR)

24x7 managed cybersecurity with complete visibility and full access to your data.

Additional Adlumin Offerings

- + Vulnerability Management
- + Patch Management
- + Penetration Testing
- + Awareness Training
- + Ransomware Prevention
- + Incident Response

Enhance Your Security Strategy

Vendor-agnostic approach integrates smoothly with both new and existing systems, allowing your security platform to scale with your business and adapt to your changing needs.

Identity protection goes beyond endpoints, enhancing security by detecting suspicious logins and ensuring that only authorized users access essential applications and data.

Discover hidden threats Leveraging threat intelligence, our team of threat hunters actively looks for threats lurking in your environment before they can cause harm.

Consolidate and Elevate Your Security with Adlumin XDR

Our feature-rich platform consolidates your security operations into one solution, offering a single login for all your security needs. Here are some of its key capabilities:

Security Information and Event Management (SIEM) offers real-time insights into potential risks with continuous monitoring and intelligent correlation of security events, keeping you audit-ready at all times.

Security Orchestration, Automation and Response (SOAR) streamlines your security operations by automating common response actions, allowing your team to focus on higher-priority tasks.

Behavioral and AI-powered detection delivers early alerts on suspicious activities, enabling more accurate threat identification and minimizing false positives.

Compliance reporting generates regulatory reports in just a few clicks, ensuring compliance without the hassle of manual processes.

Extend Your Security Operations Team with Adlumin MDR

Whether you are looking to support a lean team or lighten your team's workload, Adlumin's security experts deliver 24x7 monitoring and response, keeping your organization protected around the clock.

Expert support at your fingertips. In the event of a potential threat, connect instantly with our SOC analysts to gain insights and support, ensuring rapid resolution – minimizing the impact on your organization..

Complete visibility for informed decision-making gives you unparalleled insights into your security ecosystem and real-time access to critical data, reports, and ongoing investigations.

Incident analysis for continuous improvement allows you to leverage detailed assessments and customized recommendations following an attack or near-miss, empowering your team to bolster defenses and enhance your overall security posture.
