AI Foundations Half Day Workshop

Achieve your AI business outcomes

Creating a solid AI strategy starts with establishing clear ethics and principles. Initially, organizations should align their goals and prioritize the desired business outcomes and related business cases. Furthermore, they must address challenges such as data quality, managing data bias, bridging skill gaps, and adapting to evolving security paradigms.

Kickstart your AI journey

Blue Mantis offers a focused workshop designed to kickstart your AI Foundations Strategy. We start with a consultative assessment, spending an hour educating your team on the core principles and practices of building a successful AI foundation, providing an understanding of AI integration within your organization's infrastructure while addressing key considerations like data management and ethical AI use. Our workshop leaders then conduct a discovery session to understand your readiness across critical disciplines. Finally, Blue Mantis will return with actionable recommendations to achieve a solid start to your journey.

- ✓ One-hour educational session on AI principles and practices
- ✓ One-and-a-half-hour discovery session evaluating over 20 related disciplines
- ✓ Tailored recommendations delivered within a few days
