IT Sustainability Half-Day Workshop

Create a Culture of Sustainable IT

Most organizations face challenges with IT sustainability, including managing energy consumption, e-waste, and carbon footprints, which can increase operational costs and regulatory risks. Balancing performance with eco-friendly practices often requires significant investment and cultural change.

The Blue Mantis IT Sustainability Half-Day Workshop educates teams, assesses capabilities, and delivers the actionable steps you need to optimize environmental impact and promote resource-efficient IT operations.

Optimize IT Sustainability Efforts

The Blue Mantis IT Sustainability Workshop equips IT leaders with the tools to align operations with environmental sustainability goals. This workshop combines foundational education on sustainable technology practices with a detailed discovery of readiness across 20 key disciplines, including asset management and infrastructure automation.

Tailored recommendations provide actionable steps to optimize environmental impact, drive operational efficiency, and support long-term sustainability in hybrid-cloud environments.
