

The T-Mobile 5G Network

*Now the
best network
for your
business*

A photograph of two women in a clothing store. The woman on the left is wearing an orange button-down shirt and black pants, holding a white shopping bag. The woman on the right is wearing a white t-shirt and brown corduroy pants, holding a tablet. They are both smiling and looking at the tablet. In the background, there are mannequins wearing hats and clothing racks.

Gain a clear *coverage advantage*

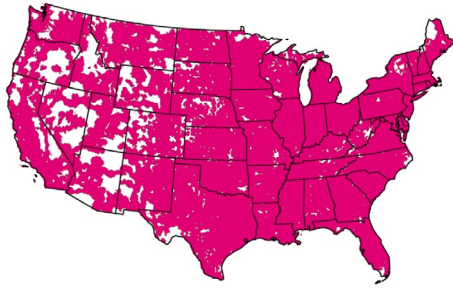

There's no denying it—T-Mobile for Business offers the largest, fastest, most advanced 5G network. With more towers, more bandwidth, and a signal that goes farther, we've now been awarded Best Mobile Network in the U.S.

From download speeds to availability and coverage, we've invested in building the best network to power your productivity. And with Ultra Capacity 5G amping up, we'll be bringing faster speeds to even more areas across the country so your business can easily scale.

A step ahead of the competition

The maps speak for themselves—T-Mobile is the leader in 5G coverage.

T Mobile

Connecting your apps from device to the cloud

To run a successful business in today's dynamic digital world, productivity has to stay consistent across locations and employees. But to keep up this pace, your employees need access to the applications required for their role—from virtually anywhere.

That's where T-Mobile for Business steps in.

Using connected devices, we can support all your cloud-based applications on a single network, ensuring your employees have the coverage they need to be successful.

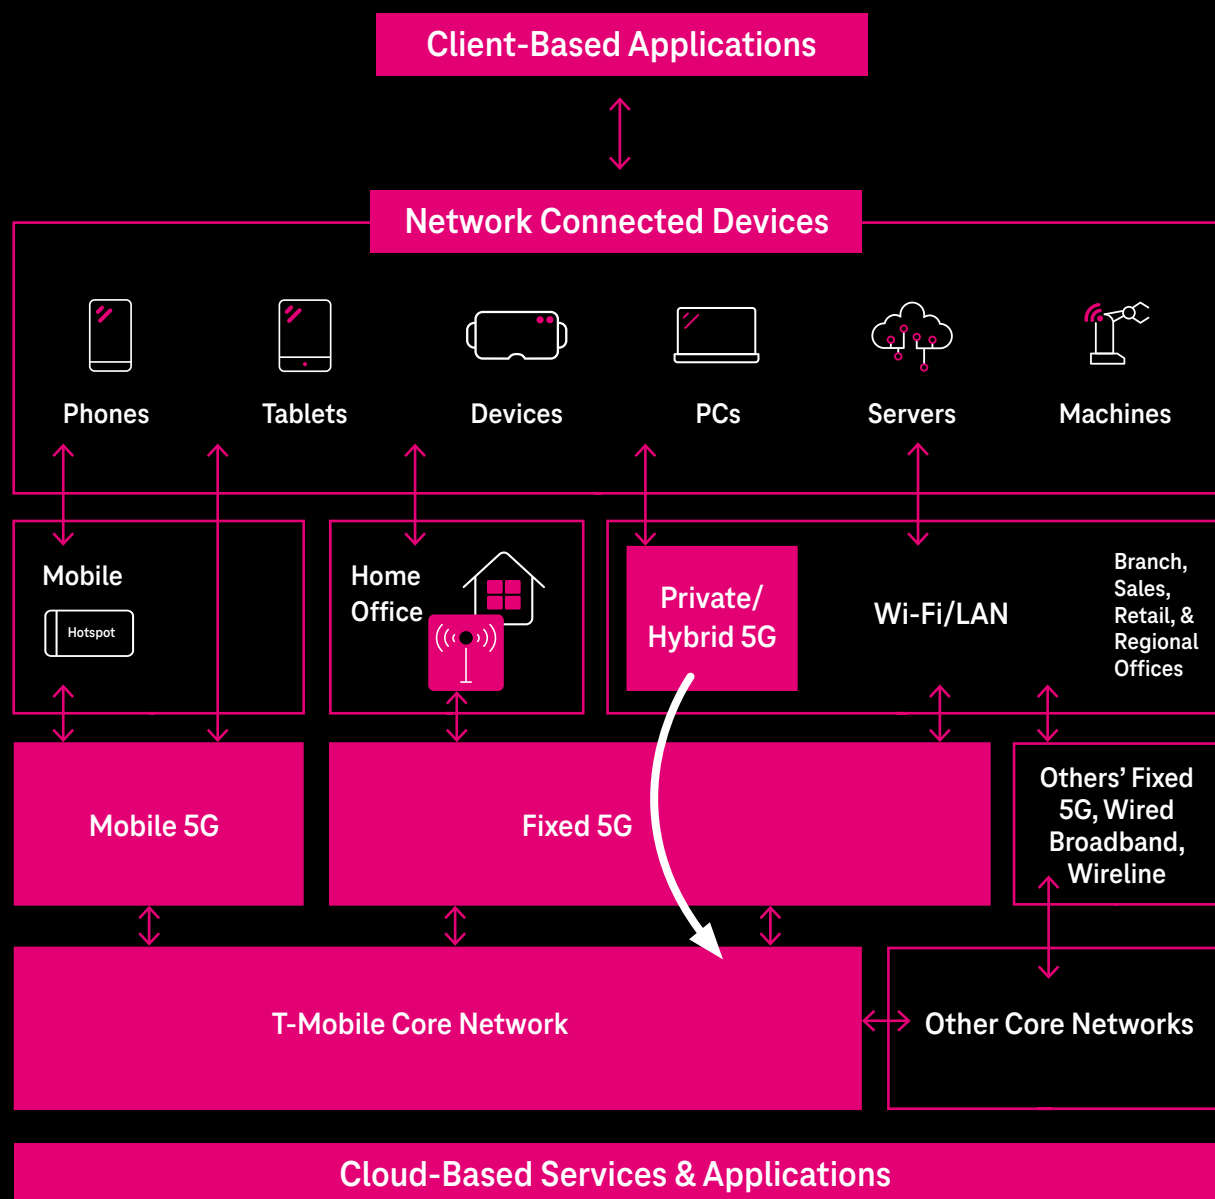

Supporting employees at every turn

Taking advantage of our network, your employees can connect to their apps in three ways:

01. Mobile: This is our foundation. Our public network has proven to be the best.

02. Home: T-Mobile has seen explosive, industry-leading fixed wireless growth quarter over quarter, allowing employees to work efficiently from their home offices.

03. Work: T-Mobile fixed wireless technology provides both primary and failover connectivity to retail stores, regional offices, and beyond. And now for the first time, we can augment coverage with private or hybrid 5G networks.

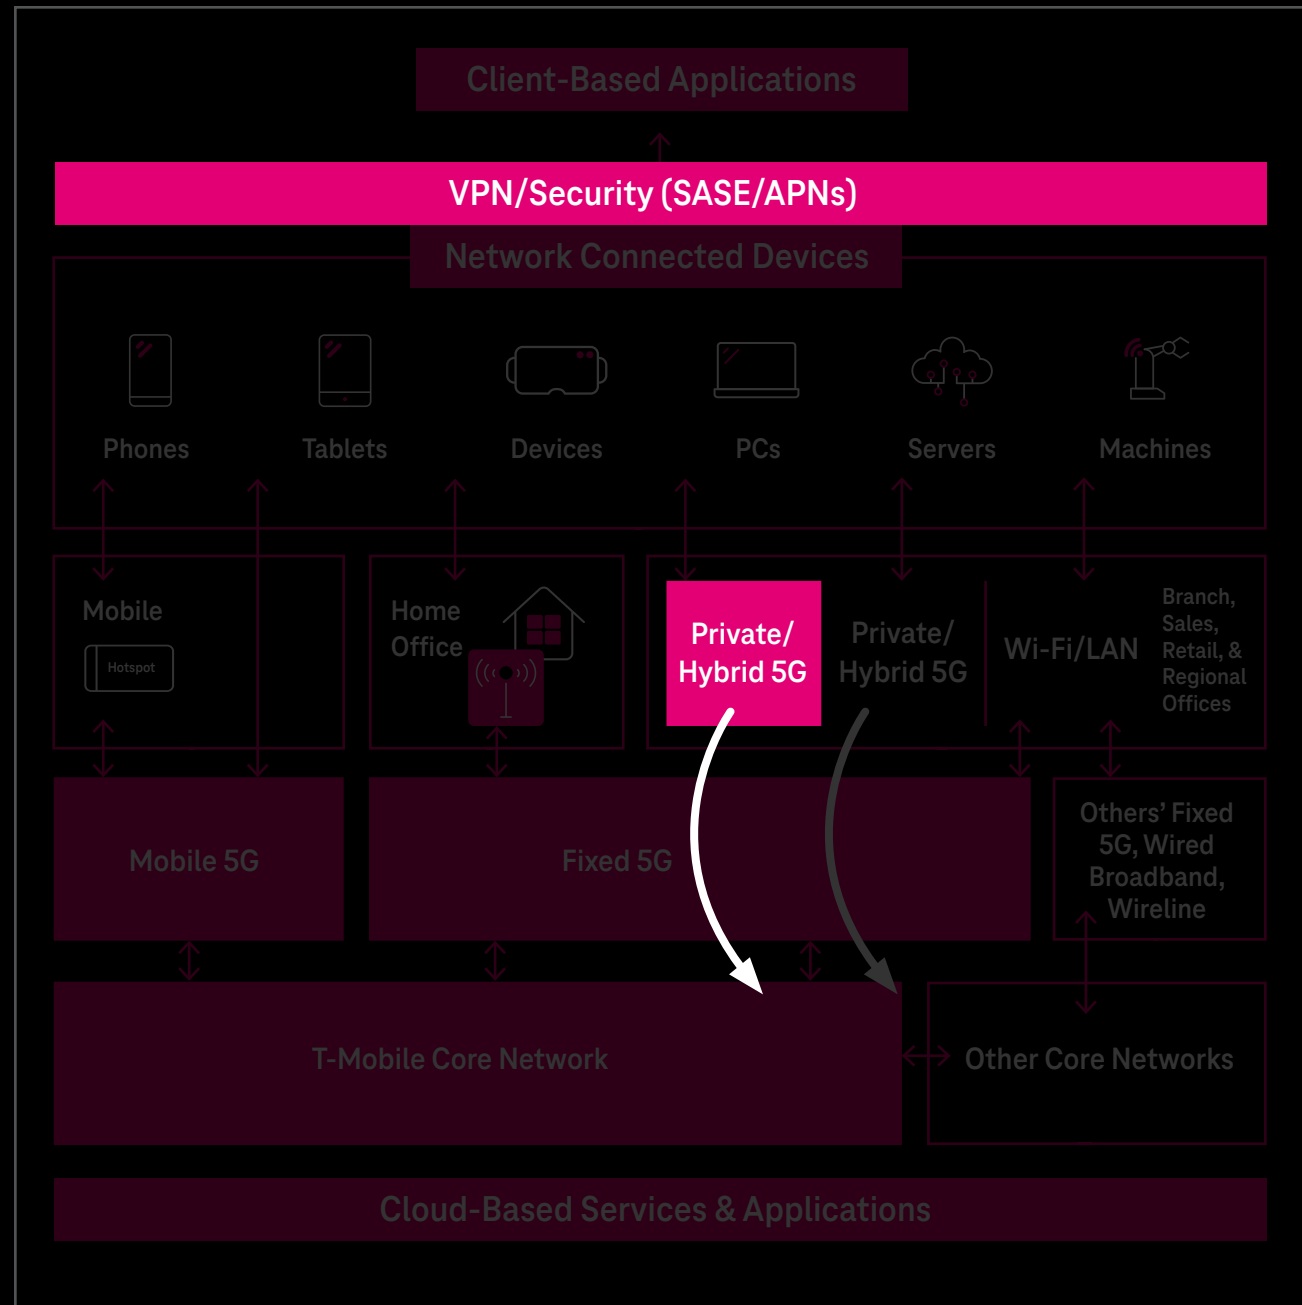

Keep your employees secure throughout their journey

Many employees who travel are likely to connect to multiple networks in a single day—making it nearly impossible to ensure security while receiving a reliable connection.

For example, an employee who begins the day at home, heads to the airport, boards a flight, and then checks into a hotel, will move through multiple Wi-Fi connections.

With all those connections, protecting data and access throughout that journey is crucial—which is why we offer VPN and security solutions to secure that traffic from end to end.

Empower your workforce *with America's best network*

The T-Mobile 5G network and security solutions can help you become a truly connected workforce.

On a single network, connected devices allow your employees to access critical applications on the go. Now, you can feel confident that your employees can stay productive from virtually anywhere.

Start taking full advantage of our superior 5G connectivity to power your business.
