Vulnerability Management as a Service

Benefits

Close Gaps and Cut Risks

Unpatched vulnerabilities are open invitations, and attackers don't wait for an RSVP. But as IT ecosystems sprawl, AI adoption increases, and resources tighten, these vulnerabilities exponentially increase. You need to automate finding any potential vulnerabilities across your IT estate before criminals can exploit them.

Stay Agile and Be Adaptable

Blue Mantis' Vulnerability Management as a Service (VMaaS) is a critical element of the Blue Mantis Protect managed cybersecurity solution, bringing automated detection, prioritization, and reporting to your entire IT environment.

Using a combination of automated AI-enhanced detection tools and live experts in our global security operations center, Blue Mantis can find, prioritize, and report on potential cybersecurity vulnerabilities across your entire environment, from endpoints to servers to digital assets.

Exclusive to Mantis Protect is your ability to integrate VMaaS with our Managed Services to offload patching and testing to our experts. Spend less time on daily IT maintenance and let us harden your security posture and streamline compliance so your internal IT teams have the time they need to accomplish those big strategic initiatives.

- Identifies and maps all devices, ports, services, and certificates on your corporate network to identify vulnerabilities and assess compliance in real time

- Lowers total cost of ownership (TCO) by eliminating capital expenditures and extra resources via a cloud based and fully managed service

- Reduces false positives by up to 90% while boosting compliance with industry-specific coverage of over 100 regulations, 1,000 policies, and 22,000 controls

Find and Fix Potential Vulnerabilities Across Your IT Estate

Vulnerability Management as a Service

Key Features

Blue Mantis Vulnerability Management as a Service delivers always-on protection through intelligent automation and deep visibility, while giving you full-spectrum coverage without the operational drag.

- Real-time detection covers even unscannable assets using lightweight, self-updating agents.
- Always-on visibility through sensors deployed across on-prem and cloud environments.
- Live compliance analysis streamlines IT management and audit readiness.
- Zero day intelligence with agent-based scans every 4 hours on endpoints and servers.
- ML-powered coverage delivers 99.99966% accuracy across your entire hybrid IT estate.
- Optionally integrates with Blue Mantis Digital Ops to automate patching across critical systems.

Identifying and Prioritizing Risks

Vulnerability Management as a Service cuts through the noise to highlight your most urgent threats using data-driven insight and predictive modelling to help you act on what matters most.

- Pinpoints top business risks using trend analysis and Zero-Day Patch impact predictions.
- Tracks certs and vulnerabilities over time to strengthen risk management.
- Role-based reporting delivers context-rich insight via an always-updated Knowledge Base.

Remediating Vulnerabilities

Speed matters. Blue Mantis Vulnerability Management as a Service streamlines remediation by integrating with your existing systems and automating patch deployment-so nothing critical slips through the cracks.

- Auto-generates remediation tickets in ServiceNow and other systems to streamline patch workflows.
- Manages exceptions where fixes pose more risk than the vulnerability itself.
- Seamlessly connects with Blue Mantis Digital Ops to fully offload and automate patch management.
