# Dark Web Monitoring

## Your Credentials and Data are for Sale

In 2025, cybersecurity researchers warned that 16 billion compromised records were on the dark web. These records are often by criminal hackers in a targeted attack, yet most organizations have zero visibility into where or how their data is being traded. Blue Mantis Dark Web Monitoring, available as an add-on to our Blue Mantis Protect managed cybersecurity service, delivers Blue Mantis Dark Web Monitoring, available as part of our Blue Mantis Protect managed cybersecurity service, delivers threat awareness by scanning across the clear, deep, and dark web to detect leaked or exposed corporate data, stolen account credentials or look alike domains. When potential indicators of compromise (IoCs) are found, we notify your team — helping you respond to previously unknown exposed data to reduce the risk of downstream attacks.

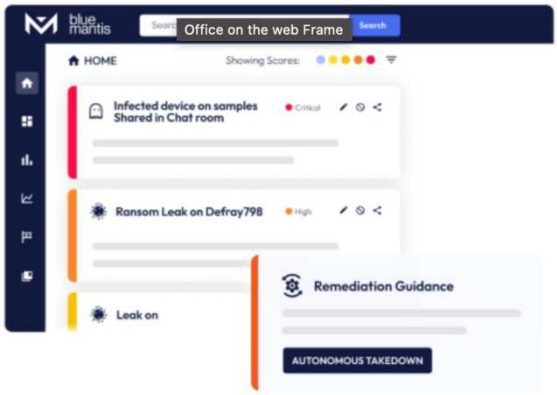
## Proactive defense from Blue Mantis

Instead of reacting to breaches after the damage is done, you get real-time alerts that signal potential compromise—giving your team the power to act fast, shut down threats, and stay ahead of attackers. You get proactive data defenses powered by intelligence from the darkest corners of the internet.

- Delivers broad visibility by analyzing vulnerabilities across vast online sources, not just internal systems.
- Prioritizes threats that matter most with an AI-driven scoring system aligned to business risk.
- Provides critical context by linking threats to known attacker behavior, enabling smarter, faster decisions.

## Benefits

- Provides clear visibility of the company's digital footprint, ensuring no breaches go unnoticed.
- Accelerates remediation of digital risks with actionable intelligence.
- Increases team efficiency by automating risk assessments and reducing monitoring time by 95%.



## Top verticals for Dark Web Monitoring

- Finance & Banking
- Business Services
- Manufacturing
- Healthcare & Life Sciences
- Retail
- Public Sector

# Dark Web Monitoring

## Monitor external attack surfaces

Your digital footprint is bigger—and more exposed—than you think. From misconfigured cloud instances to forgotten code leaks, attackers are constantly scanning for weak points you didn't even know existed. Blue Mantis gives you a live view into your external attack surface, helping you find and fix exposure before it's exploited.

- Provides a real-time view of a company's digital footprint.
- Monitors online code repositories like GitHub for technical data leaks.
- Identifies publicly accessible cloud services that may leak data.
- Scans anonymous sharing sites for sensitive information using unique identifiers.

## Accelerate reconnaissance

Speed and intelligence are everything in security operations. Whether you're stress-testing your defenses or assessing risk during high-stakes moments like mergers and acquisitions, Blue Mantis accelerates external assessments with precision and scale—turning recon into a competitive advantage.

- Conducts comprehensive external security assessments of IT systems and business processes.
- Supports Pen Testing and Red Teaming engagements to evaluate digital footprints.
- Helps identify risks during mergers or acquisitions through accelerated IT due diligence.

## Stay Fully Protected
