

# M365 Critical Security Controls Assessment

## Benefits

- **Identify common and unknown vulnerabilities** attackers use to infiltrate your Microsoft 365 environment based on CIS security controls.
- **Remediate major security concerns** in your M365 environment while documenting strategies to prevent future data exfiltration.
- **Improve M365 security** observability, notification, and reporting with actionable, prioritized recommendations.

## Business Challenge and Solution

In 2023, businesses using Microsoft 365 and Entra ID faced over 150,000 business email compromise attempts per day and 40 billion attempted password attacks. Most IT teams lack the bandwidth to consistently identify and remediate the configuration gaps that create the most exposure.

**The Blue Mantis M365 Critical Security Controls Assessment** evaluates your M365 tenant's configuration against CIS standards, delivers gap analysis and prioritized remediation strategies, and remediates the most common vulnerabilities for you during the engagement.

## Key Features and Scope

During a week-long engagement, Blue Mantis certified cybersecurity experts evaluate 20+ technical and procedural safeguards including:

- **M365 cloud** security controls aligned to CIS standards.
- **Microsoft Entra ID** identity and access management analytics.
- **Exchange, SharePoint, Teams, and Copilot** AI data policies.
- **Gap analysis** with prioritized remediation recommendations.
- **Hands-on remediation** of the most common M365 vulnerabilities.
- **Enhanced visibility**, notification, and reporting configurations.

## Why Blue Mantis

Blue Mantis is SOC 2 accredited and brings certified cybersecurity expertise to every M365 engagement, remediating vulnerabilities, not just reporting them, so IT leaders gain real visibility and confidence.
