

Analytics Assessment

Benefits

- Executive clarity on data and analytics risk
- Confidence in what to prioritize – and what not to
- Clear accountability for critical data
- Practical, executable roadmap forward

Business Challenge and Solution

Organizations that understand their analytics maturity, data quality, architecture, and AI readiness are more likely to turn data into competitive advantage - while avoiding costly AI failures and data-driven mistakes.

But without a structured and objective assessment, organizations often struggle to accurately identify the data and architectural gaps that limit analytics and AI success.

The **Blue Mantis Analytics Assessment** provides a comprehensive current-state analytics and data maturity assessment to quickly set you on the right path forward.

Key Features and Scope

- **Stakeholder Interviews:** Interviews to identify business goals, reporting needs, pain points, and AI readiness.
- **Data Profiling and Tool Evaluation:** Review of data sources, quality, and tools to uncover gaps, risks, and AI opportunities.
- **Architecture Review:** Assessment of analytics architecture for scale, performance, security, and cloud alignment.
- **Governance and Process Assessment:** Review of governance, ownership, security, and processes that support trusted analytics.
- **Roadmap Development:** Prioritized roadmap for analytics and AI investments, balancing quick wins and long-term goals.
- **Executive Read-Out Workshop:** Executive presentation of findings and next-step recommendations.

Why Blue Mantis

Blue Mantis combines analytics, AI, and full-stack IT capabilities to reduce vendor sprawl and help organizations move faster with less risk and stronger alignment between strategy and execution.
