

Modern Endpoint Orchestration Assessment

Benefits

- **Reduce vendor complexity** and overlapping spend by consolidating tools and licenses inside the M365 ecosystem.
- **Improve security posture** through integrated Zero Trust controls leveraging Defender XDR, Entra ID, Intune, and Purview.
- **Free IT capacity** from maintenance work to focus on analytics, AI, and business growth.
- **Connect financial savings to technical outcomes** with a model built for both CFO and CIO alignment.

Business Challenge and Solution

Most IT teams spend 70% of their time keeping the lights on. Multiple point solutions, legacy systems, and duplicated tools drain resources, create security gaps, and prevent organizations from fully leveraging the Microsoft 365 investment they already own.

Blue Mantis Modern Endpoint Orchestration Assessment combines financial clarity with technical execution, delivering a CFO-ready cost savings analysis and a 12 to 24-month prioritized modernization roadmap in two connected engagements.

Key Features and Scope

- **M365 TCO Workshop:** Map existing licenses and third-party tools, calculate true total cost, and identify redundant spend. Output is a CFO-ready cost savings analysis.
- **MEO Assessment:** Analyze dependencies across identity, device, security, collaboration, and network to design a phased modernization roadmap with cost and effort estimates.
- **Implementation Support:** Execute the roadmap in partnership with your team, with Microsoft co-funding programs available to offset engagement costs where eligible.
- **Zero Trust Modernization:** Sequence identity, device, app, and data management improvements using native Microsoft controls to accelerate Zero Trust maturity.
- **Microsoft Native Architecture:** Leverage existing investments in O365, Defender XDR, Entra ID, Intune, and Purview to maximize value without adding new vendor complexity.

Why Blue Mantis

Blue Mantis connects business savings to technical outcomes using your existing Microsoft 365 investment, delivering \$40–\$60 per user per month and up to \$1.5M in three-year savings for a 1,200-user organization, before implementation begins.
